

GITHUB

WHAT IS GITHUB?

GitHub is a for-profit company that offers a cloud-based Git repository hosting service. Essentially, it makes it a lot easier for individuals and teams to use Git for version control and collaboration GitHub is a for-profit company that offers a cloud-based Git repository hosting service. Essentially, it makes it a lot easier for individuals and teams to use Git for version control and collaboration.

FUNCTION

GitHub is a hosting platform, owned by Microsoft, that offers developers the ability to create code repositories and store them securely in the cloud, using a version control system called Git.

HISTORY

The great GitHub platform was created by Chris Wanstrath, PJ Hyett, Tom Preston-Werner and Scott Chacon in February 2008 in San Francisco – USA and to this day it is still located in the same place.

In February 2009, the members of the company announced in an interview for Yahoo that GitHub had already reached more than 46 thousand public repositories, a good amount that indicated the popularity that was going to come for Github.

HOW TO USE IT

To use GitHub it is very simple, you just have to register on the GitHub platform, next you must create a repository for your project following the steps in our article How to create a Github Repository and upload the files of your Project in this Easy way This way you will have your first steps with GitHub.
